62 tests · 13/13 offline smoke

Every score walks back to evidence.

DECK CLAIMS · TRUST

UNSUPPORTED

ECC is a profiler and optimizer that sits under the agent harness. *slide 3*

UNSUPPORTED

ECC instruments every agent hop — tool calls, model routes, token cost — with zero prompt changes. *slide 3*

UNSUPPORTED

CONTRADICTED

ECC delivers sub-100ms agent routing in production.

CLOSE

THE DECK SAYS

Slide 4: The wow moment: live latency board

"ECC delivers sub-100ms agent routing in production."
deck://ecc/slide/4

THE REPO SHOWS

"UserPromptSubmit runs on every single message - adds latency to every prompt."
data/demo/repos/ecc/the-longform-guide.md:99-101

"In our 50-task benchmark, mgrep + Claude Code used ~2x fewer tokens than grep-based workflows — a token benchmark, not a sub-100ms routing-latency measurement."
data/demo/repos/ecc/the-longform-guide.md:138-139

See conflict →

UNSUPPORTED

9 design partners are running ECC against their own agent stacks. *slide 6*

UNSUPPORTED

A median 38% token-cost reduction was observed across partner workloads. *slide 6*

UNSUPPORTED

ECC has 410 GitHub stars and 27 external contributors in the first 8 weeks. *slide 6*

No model invents a number.

```
// src/lib/scoring.ts – the founder axis, deterministic
function founderAxis(input: ScoringInput): AxisScore {
  const { founderScore, history } = input;
  const dated = [...history].sort((a, b) => a.appliedAt.localeCompare(b.appliedAt));
  const prior = dated.length > 0 ? dated[0] : null;
  let trend: Trend = "baseline";
  if (prior && prior.founderScore !== founderScore) {
    trend = founderScore > prior.founderScore ? "improving" : "declining";
  }
  return { axis: "founder", score: clamp(founderScore), because, trend };
}
```

Captured once. Replayed deterministically.

TypeScript errors

What it isn't — on purpose.

- Auth is a demo gate, not production auth.
- Voice brief ships a text fallback.
- Every replay is labeled a replay.
